

Supporting Midlands Talent

Central Scanning have been lucky to do some work with a Midlands based Animation & Film Making company based in Digbeth, Birmingham.

Yamination Studios is an animation studio situated in Birmingham, West Midlands, specialising in stop-motion/frame animation, but also covering other forms. The studio offers additional aspects of production and design from character/set/prop design, illustration, storyboarding, scriptwriting, to character/set/prop construction and editing.

We were asked to do some 3D Scanning of their main character Bart. We then 3D Printed some models out of him on our Objet Eden 500V.

The launch night was held in their new studios in Digbeth situated in Birmingham. The Central Scanning team took along the Artec 3D Range of scanners and did some live body scanning for some of the attendees!

An enjoyable night had by all, and it was great to see such budding talent in the Midlands area!
